1.   Overview

1.1.   COMPARISON is an application designed to compare files between two folders.

1.2.   At the end of its run, COMPARISON displays a test results log that includes how many similar files there are, how many files exist in only one folder, and a table that shows the differences in content between each file for all files.

2.   How to use

2.1.   Press 1 to run the app.

2.2.   Insert the full location of folder 1 or keep empty to use default.

2.3.   Insert the full location of folder 2 or keep empty to use default.

2.4.   The log will be opened automatically.

2.5.   Make sure your devices open HTML files in a browser.

3.   Settings

3.1.   Folder 1 > the location of the first folder

3.2.   Folder 2 > the location of the second folder

3.3.   Output > the location of the output file

4.   Related files

4.1.   -N/A-

5.   Output

5.1.   HTML log file describing the different files and the differences between each file in folder 1 and folder 2.
